

## Project Description

For over a century, Austin White Lime Company has supplied high quality lime products to a variety of industries throughout the southern United States. They pride themselves on being a local Texas Company, owned and operated as well as providing quality products and customer support second to none.

AWL was in search of a wireless sensor system for their rock processing facility. They needed to ensure the integrity of their processing units at all times. They wanted to be able to have access to real-time information regardless of time of day.

Utilizing the Swift Sensor Bridge 1020 along with Swift Sensor wireless temperature sensors and vibration sensors, Austin White Lime is now capable of viewing this real-time information in one screen and from their mobile devices ensuring that all is well at their facilities.

Products	
Swift Sensors Bridge	SS-BRG-1010 Standard Bridge
Types of Sensors	SS-SEN-102 Wireless Temperature Sensor
	SS-SEN-201B Wireless Vibration Sensor
