

## Project Description

For over 90 years Breezy Point Resort has built its reputation as the Minnesota 4-season vacation destination for families, golf groups, conferences and weddings. Their Minnesota resort guests from throughout the Midwest and Canada enjoy their wide choice of lodging options, great food in 4 distinctively different restaurants and superior service.

BreezyPoint was in search of a wireless sensor system for all their critical refrigeration and kitchen systems. They needed to ensure the integrity of their cold chain units at all times. Additionally, they wanted to be able to have access to real-time information regardless of time of day.

Utilizing the Swift Sensor Bridge 1010 along with Swift Sensor wireless temperature sensors, all BreezyPoint staff are now capable of viewing this real-time information in one screen and from their mobile devices ensuring that all is well at their facilities.
